DETAILED ACTION

Allowable Subject Matter

1. Claims 71 -75 allowed.

2. Claims 56-63,66-70 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Prior art fails to show, the actuator as a comb structure acting on a lever arm, the actuator structured as a ratchet wheel, ratchet wedge and ratchet shaft. Prior art also fails to show, a compressive strain applied to the resonator as the temperature increases wherein; the first and second lever arm rotates about a pivot point so as to proportionally modify the amount of strain applied to the resonator beam and a actuator structured as a expansion bar that provides a actuation force proportional to a temperature.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 55,64-65 are rejected under 35 U.S.C. 102(a) as being anticipated by Hsu("Mechanically Temperature-Compensated Flexural-Mode Miromechnical Resonator"). Hsu discloses a micro mechanical resonator in fig.1-7 comprising a resonator beam (A) having a first end and a second end, the resonator beam suspended above a substrate(C) by the first end and the second end; providing a lever arm (D) see fig.7(cantilever), being connected to a pivot [(F) bending truss] and to the first end of the resonator beam; and using an actuator force to the lever to apply strain onto the resonator beam. Wherein, the actuation force supplied by the actuator proportional to a temperature and a tensil strain is applied to the resonator beam as the temperature increases.

Response to Arguments

5. Applicant's arguments filed 6/17/03 have been fully considered but they are not persuasive.

In response to the applicant's argument that Hsu does not disclose a lever arm connected to a pivot and the first end of the resonator beam noted.

However, Hsu clearly show a cantilever arm in fig.7 and a pivot(bending truss) connected to the first end of the beam.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2834

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
